

STUBBLE POTS & TYRES FURNITURE

Aligned with UN SD Goal 15 (Life on Land)

In our continuous efforts as earth saviours we started a small effort to prevent burning of stubble and rubber tyres. These hazardous activities add to the pollution of the environment, releasing toxic gases in the air we breathe. Stubble, along with cow dung is converted into a nutritious hydrated mixture and is used to line the inner walls of clay pots. Sturdy, elegant, stylish furniture is created out of used tyres, which add to the beauty of our gardens, terraces and balconies. **Our efforts are ongoing.**
